

Additional Information Regarding Charging Vaimoo E-Bikes

Unfortunately, no charger is included with the Vaimoo e-bikes. Suitable 36V/2A chargers can be purchased from specialized suppliers and dealers. If desired, we can put you in contact with these suppliers.

The batteries are configured in such a way that they must always be disconnected from the e-bike before charging.

Charging is possible by connecting the 6-pin plug of the charger to the grey connector on the bicycle battery (see photos).

Once the battery is fully charged, place it back into the bicycle and close the cover flap.

For reference, we have attached example photos of a suitable charger, connector, and the correct connection point on the bicycle battery.
